

Profund (Jardine Lloyd Thompson)

Improve their delivery capability with Pragmatic Agile

Situation

Profund is a leading provider of pension software. Since 1984 Profund Solutions Limited has been developing, implementing and supporting systems specifically designed for those with the responsibility for running pension schemes.

Profund is trusted by an impressive client base covering actuaries, accountants, in-home pension departments, pension scheme trustees, the majority of the UK third-party administrators and Registered Administrators.

Radtac Services Delivered

In 2009 Profund employed Radtac to enable their 200 People in Profund Pensions Software & Services Group and their off-shore development partner in India.

The environment was largely legacy client-server and web-based applications and the delivery capability was constrained by JLT-Governance based-on PRINCE2 Agile Enablement.

Radtac provided Agile Project Management and Delivery Services:

-  Selection and definition of Agile approach framework
-  Culture transformation support for Senior Management
-  Agile briefing, overviews and detailed training for project managers, teams and stakeholders
-  Coaching for teams
-  Trained and coached to build internal facilitation capability

Outcomes

-  Radtac developed a standards and guidelines website describing the Profund delivery and management approach
-  Offshore Agile delivery capability
-  Improved delivery of information technology
