

# Four NHS Primary Care Trusts Go Agile

To enable effective commissioning

## Situation

SHIP (Southampton, Hampshire, Isle of Wight and Portsmouth) represents four primary care trusts (PCTs) who are implementing world class commissioning of NHS services, and evolving to interact and better collaborate with service suppliers highly collaboratively via Category Management. SHIP is implementing an integrated Agile framework, to ensure optimum delivery of high quality products.

This Agile transformation has some distinct features which makes it leading edge:

- ✚ SHIP is implementing an Agile framework for business
- ✚ Agile is being implemented at the portfolio, programme and product levels.

## Radtac Services Delivered

Radtac piloted the Agile commissioning framework on a number of commissioning programmes within SHIP, the 'flagship' implementation being the Dementia Services programme.

Radtac provided a full Agile commissioning training programme that integrated DSDM, SCRUM, MSP and PRINCE2, Dementia Services Commissioning Agile coaching and an Agile Services Commissioning Model.

## Results

The Project to implement SHIP Dementia Commissioning Services was delivered within 3 months, with the same budget and number of people, a result that previously took 2 years to achieve.
